Built-in Commands

Meta Commands (dot commands)

Extension Commands (bang commands)

Types of Commands

Built-in Commands: commands are controlling and getting information from the debugging target.

- **g** - go , **k** - call stack , **~** - list threads

Meta Commands: commands are used for controlling debugger itself and the command always starts with dot.

- **.cls** - Clear command window display , **.reboot** - Restart the target computer

Extension Commands: many different debugger extensions, which can be developed by 3rd party or individual developers. Debugger extension commands start with bang(!).

- **!dumpstack** - Display stack trace , **!threads** - Display all managed threads in the process
